- a sea turtle
- a ray
- an octopus
- crabs
- starfish
- sea urchins
- shells
- spiral shells
- a shoal of fish
- striped fish
- orange fish
- a blue fish

Canary Island plants

Leaves, stems and size give clues to a plant's home. Look closely to see how it gets through the weather.

By the sea, plants face heat and dry soil. Up in the mountains, there's cold and wind. Not all can grow in both.

Along the way, a new plant catches your eye. Here it has the water, warmth and shelter it needs.

TRY IT! You are a plant in a dry place. How do you save water?

La Laguna

La Laguna grew inland, away from the sea. After a harbour visit, it shows you another side of island life.

Colourful houses, churches and wooden balconies line the centre. Look above the shop fronts and beside you: little details are waiting to be noticed.

Shutters let light and air inside. Behind a wall, a house may hide an open courtyard, with rooms all around it.

TRY IT! Imagine your own courtyard inside a house. What would you put there?
